DETAILED ACTION

1. This is a continuation of application Serial Number 09/169,276 filed October 8, 1998, now abandoned.

Information Disclosure Statement

2. The IDS paper filed January 23, 2002 has been received and placed in the record of file.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claims 1-16 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Sachdeva et al (U.S. Patent No. 6,315,553).

As per claims 1-16, Sachdeva et al discloses a method and system for site treatment of an orthodontic patient comprising processing/reviewing tooth arrangement of a patient by generating

Art Unit: 2671

digital information regarding the orthodontic patient by a site orthodontic system. The orthodontic system then transmits the digital information to an orthodontic server, which creates an electronic patient record therefrom. The orthodontic server then generates an initial treatment plan includes precise steps to obtain a desired orthodontic structure. The orthodontic server then transmits a digital version of the initial treatment plan to the site orthodontic system (see abstract, Figs. 2, 10-13 and 16) which now clearly anticipates the features as now claimed.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The reference of Sachdeva et al (U.S. Patent No. 6,350,120) is cited because it shows a method and system for designing an orthodontic apparatus to provide tooth movement.
